

Enterprise Assessment Platform

NetDimensions Enterprise Assessment Platform

The Enterprise Assessment Platform (EAP) offers an online platform through which organizations can create, deploy and manage assessments.

EAP is tailored for organizations that need to evaluate user competencies.

For example, in flight operations or operations oriented towards licensing, certification or compliance.

EAP Capabilities

EAP is designed specifically for departments and organizations that must regularly assess individuals; for example to gauge a new applicant's suitability for a particular job or evaluate an existing employee for licensing, certification or compliance purposes.

EAP offers an integrated platform through which organizations can create, organize and manage questions for assessments.

Features

In addition to offering organizations the ability to:

- Generate different online question types (including multiple choice, matching, essay, true/false, rating, fill-in-the-blank),
- Schedule assessments and
- Specify exam conditions (for instance, Must the exam taker answer each question sequentially? Can the exam taker freely navigate around the assessment? Must the exam taker operate under an enforced time limit?),

EAP provides extra features such as:

Privileges

Different individuals may be granted different privileges, for example to enter, review and approve questions.

Question Pools

For easier administration, questions may be organized into question pools and for better security, different permissions may be applied to different pools.

Examination Environment

EAP allows organizations to tailor examination environments for different assessments:

- Time limitations can be specified along with additional security restrictions
- Exam takers can be provided with instant feedback following an assessment
- Exams can be printed allowing for assessments to be conducted in a more traditional (paper-based) arrangement – in addition to the online format.
- Re-sit exam generation provides for the automatic creation of a new exam with a guaranteed number of different questions.

Added Security

Distribution of exams can be restricted to specific IP addresses, facilitating their delivery to particular training centers.

Access codes with a two-level password associated with each assessment can be provided to facilitate bulk authorization for the delivery of examinations.

Auditing

Auditing of all changes to examinations, questions, and transcripts is maintained at all times to ensure that a comprehensive historical record of assessment administration is kept.

EAP means efficient assessment

In short, EAP allows organizations to quickly and efficiently assess individual competencies – and both create and manage the questions and exams used in these assessments. EAP also provides additional security, auditing and environment definition functions to ensure that your training and management initiatives are successfully developed, implemented and conducted.
