

MyTools+ eLearning Development Toolkit

Custom eLearning Development Templates

For many organizations developing eLearning courses in-house can be challenging. Courses created by various groups within an organization often follow different design and technology standards — producing courses that have inconsistent branding, design and functionality.

These courses are typically developed by instructional designers who may or may not have technical or graphics backgrounds. As a result, they spend much of their valuable time wrestling with programming tasks and graphical layouts — only to get a less than desirable result.

MyTools+ program addresses this problem by providing a suite of custom-built, pre-designed eLearning templates that instructional designers and developers can use to create engaging interactive courses, with consistent branding, functionality and navigation, quickly and easily.

The MyTools+ templates are custom-designed for your preferred authoring software and are provided with instruction tutorials on how to best utilize the templates. Also included is a two day training workshop. We'll send an expert developer to your facility to train your IDs and developers on how to best utilize the templates in their course designs.

With MyTools+ you save time and money because most of the design and programming tasks are done. You simply choose a template and add your content.

Common template elements include:

- Title Page
- Lesson Title Page
- Objectives Page
- Expository Layouts
- Explore Activities
- Knowledge Check Activity
- Matching Activity
- Case Study Activity
- Quiz Functionality
- Glossary
- Dynamic Menu
- Progress Indicator
- Page Numbering
- Course Help
- Reference Section
- and many more...

MyTools+

MyTools+ templates allow instructional designers to focus on creating great training instead of programming and formatting. And MyTools+ templates can be created for your preferred authoring tool!

The image displays two screenshots of a Bose e-learning interface. The top screenshot shows a page titled "Computer Speakers" with a navigation menu at the top containing "glossary", "reference", "help", and "save and exit". A callout box points to the navigation menu, stating: "Pre-built course navigation menu, automatically generates itself based on course hierarchy." Another callout box points to the "help" button, stating: "Customized interface components for glossary, reference, job aids and more." A third callout box points to a set of speaker icons, stating: "Pre-programmed popup and drag & drop style interactions - just swap in your content!". The bottom screenshot shows a page titled "Introduction to Bose Pro Sound 2008" with a large image of the product. A callout box points to the page layout, stating: "Consistent company branding built into the custom templates to promote continuity with e-learning development from different groups in the organization." Another callout box points to the page content, stating: "Dozens of page templates are provided including those with custom animation components which add flair to your courses with no design or programming required." A final callout box points to the "Back" and "Next" navigation buttons, stating: "Intuitive and consistent navigation treatments provide a more comfortable experience for your learners."
